Eyal Alfasi

Senior Software Engineer

052-6641933 | eyalalf@gmail.com | LinkedIn | GitHub

Senior Software Engineer with 5+ years of experience designing and building production systems using TypeScript, Node.js, React, and AWS. Experienced in data-heavy user interfaces, frontend architecture, and scalable, reliable backend systems. Owns complex projects from ambiguous requirements through technical design, production rollout, and ongoing improvement, using AI-assisted workflows.

PROFESSIONAL EXPERIENCE

Aug 2025 - Present | **DoorLoop | Senior Full Stack Engineer**

- Developed Showings, DoorLoop's tour-scheduling product adopted by 1,200+ property management companies, working across design, implementation, and rollout. Built a booking engine with concurrency-safe slot reservations, approval workflows, and asynchronous reminders using React, TypeScript, Express, MongoDB, Redis, and BullMQ.
- Owned DoorLoop's e-signature system, processing 1,000+ signature requests daily. Redesigned document and template management around Dropbox Sign as the source of truth, improved reliability, and delivered customization capabilities that helped secure enterprise customers.
- Led technical design and implementation of a lead-to-lease pipeline, connecting prospect, showing, application, and lease data so property managers could track progress and take action at each stage from one workspace.
- Built a shared React/TypeScript drawer UI library adopted across teams, providing reusable components and detail views for consistent entity workflows across the product.
- Led the migration from Cypress to Playwright across teams, enabling more end-to-end tests to run in parallel.

Jan 2025 - Jul 2025 | **FacelessClip | Co-Founder & Software Engineer (Demo)**

- Co-founded and built an AI video creation SaaS from concept to private beta, owning end-to-end engineering and implementing the full payments integration with Paddle.
- Built an event-driven pipeline integrating OpenAI, Replicate, and ElevenLabs for scripts, visuals, and narration, with Remotion rendering on AWS Lambda/S3, retries, failure recovery, and TikTok/YouTube publishing.

Jul 2022 - Dec 2024 | **Unity | Full Stack Engineer**

- Developed a unified campaign creation workflow and integrations with multiple ad networks using React, TypeScript, NestJS, PostgreSQL, and Amazon SQS. Built queue-based retry mechanisms around each ad network's API constraints, reducing integration failures from ~50% to near zero.
- Built data-heavy React/TypeScript dashboards and a reusable datagrid supporting inline editing, validation, and custom cell renderers. Contributed to the platform's microfrontend architecture using Webpack Module Federation.

Jun 2021 - Jul 2022 | **Moveo Software (Anyword & Assuta) | Full Stack Engineer**

- Built Anyword's rich-text editor from the ground up using Slate.js, supporting reusable formatting templates, custom editing behavior, and score indicators tied to AI-generated text variations.
- Developed end-to-end features for two production healthcare systems at Assuta, supporting hospital staff onboarding and patient appointment scheduling using Angular, Node.js, Express, and MongoDB.

SKILLS

TypeScript, JavaScript, Node.js, NestJS, Express, React, Next.js, Remix, Angular, Vue
MongoDB, PostgreSQL, Redis, BullMQ, RabbitMQ
AWS, Docker, CI/CD, Webpack, Vite, Vitest, Playwright, Claude Code, Codex, Cursor

ACHIEVEMENTS

Four-time Israeli Rubik's Cube Champion. WCA results
