Eyal Alfasi

Senior Full Stack Engineer

052-6641933 | eyalalf@gmail.com | LinkedIn | GitHub

Senior Full Stack Engineer with 5+ years of experience building production systems across frontend and backend using React, TypeScript, Node.js, and AWS. Leads complex projects end to end, translating product and business requirements into pragmatic technical designs that balance reliability, maintainability, and delivery speed. Experienced in scalable frontend architecture, asynchronous and event-driven systems, and production rollout and observability.

PROFESSIONAL EXPERIENCE

Aug 2025 - Present | DoorLoop | Senior Full Stack Engineer

- Built an asynchronous, multi-tenant weekly reporting pipeline serving ~50,000 users, partitioning work by customer organization, improving query performance, and preventing duplicate work through idempotency.
- Owned and evolved the e-signature domain, leading an architectural redesign that eliminated duplicated document storage and cross-system synchronization, simplified the codebase, and delivered functionality required by large enterprise customers.
- Led multiple projects within DoorLoop 2.0, rebuilding core product views, driving a system-wide color and typography migration, and building shared frontend and design-system infrastructure adopted across teams.

Jan 2025 - Jul 2025 | FacelessClip | Founding Engineer

- Built an event-driven AI video generation pipeline using Convex, OpenAI, ElevenLabs, and Replicate, orchestrating multi-step script, narration, caption, and image generation with failure handling.
- Designed the rendering and distribution flow using Remotion on AWS Lambda, S3, signed webhooks, and TikTok and YouTube APIs, supporting scheduled and on-demand video rendering and platform uploads.

Jul 2022 - Dec 2024 | Unity | Full Stack Engineer

- Designed an event-driven notification pipeline using AWS SNS/SQS, decoupling notification delivery from product workflows and supporting reliable asynchronous processing.
- Implemented campaign-creation integrations with major advertising platforms, using queue-based rate limiting and retries to handle external API constraints and reduce failures from ~50% to near zero.
- Built complex campaign-creation flows, dashboards, and data-heavy interfaces in React and TypeScript, while maintaining a Webpack Module Federation microfrontend architecture and building reusable infrastructure including an editable datagrid adopted across the platform.

Jun 2021 - Jul 2022 | Moveo Software (Anyword & Assuta) | Full Stack Engineer

- Built a core content-creation editor for a GenAI platform using Slate.js and the browser Selection API, implementing complex editing behavior, event handling, and dynamic rendering for AI-generated content.
- Owned and evolved two production healthcare systems for hospital staff onboarding and public appointment scheduling, delivering end-to-end features across Angular, Node.js, Express, and MongoDB.

Jan 2021 - Jun 2021 | Wizer | Full Stack Engineer

- Developed end-to-end features for a multi-tenant scheduling platform using React, NestJS, and MongoDB.

SKILLS

Languages & Frontend: TypeScript, JavaScript, Python, Go, React, Angular, Webpack Module Federation
Backend & Data: Node.js, NestJS, REST APIs, Microservices, Event-Driven Systems, PostgreSQL, MongoDB, Redis
Testing: Cypress, Playwright, Jest, Vitest
Cloud & Observability: AWS, Docker, CI/CD, New Relic, Datadog, Sentry
